# ANDROID

## 1. Introduction

In this assignment you need to work out on how to change the app icon and name.

## 2. Problem Solution

1. Open the AndroidManifest.xml in Eclipse and make these changes:

```
<application  
  
<!-- CHANGE THE ic_launcher to the name you selected in step 3 shown above -->  
  
    android:icon="@drawable/ic_launcher"  
  
<!-- CHANGE THIS TO GIVE A NEW NAME TO THE APP -->  
  
    android:label="NEW APP NAME" >  
  
    ....  
  
</application>
```

2. Instead of hard coding the app name, you should ideally, create an entry for it in the strings.xml. For example:

```
<string name="app_name">NEW APP NAME</string>
```

3. And pass it to the android:label="" attribute show above:

```
    android:label="@string/app_name"
```

## 3. Output

None
